

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using \LaTeX . Authors who are able to do so are invited to prepare their manuscripts using \TeX . (We accept Plain \TeX , \LaTeX or \LaTeX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Multiple closed orbits for N-body-type problems	
Shiqing Zhang	1
On approximation measures of q-logarithms	
Tapani Matala-Aho and Keijo Väänänen	15
Fixed point theorems and equilibrium points in abstract economies	
Donal O'Regan	33
The n-th derivative characterisation of Möbius invariant Dirichlet space	
Rauno Aulaskari, Maria Nowak and Ruhan Zhao	43
Primitive ideals in the coordinate ring of quantum Euclidean space	
Sei-Qwon Oh and Chun-Gil Park	57
Farthest points and monotone operators	
U. Westphal and T. Schwartz	75
Monochromatic sequences whose gaps belong to $\{d, 2d, \dots, md\}$	
Bruce M. Landman	93
Projective Schur algebras over a field of positive characteristic	
Eunmi Choi and Heisook Lee	103
Quotient supermanifolds	
Claudio Bartocci, Ugo Bruzzo, Daniel Hernández Ruipérez and Vladimir Pestov	107
Some p-groups of Weilandt length three	
Elizabeth A. Ormerod	121
On isomorphisms of connected Cayley graphs, III	
Cai Heng Li	137
Lattice basis reduction, Jacobi sums and hyperelliptic cryptosystems	
Joe Buhler and Neal Koblitz	147
Comparable characterisations of two classes of Banach spaces by subdifferentials	
John Giles	155
Some inequalities for planar convex sets containing one lattice point	
M.A. Hernández Cifre and S. Segura Gomis	159

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Multivariate Bonferroni-type inequalities and optimality	
Tuhao (John) Chen	167
Stability of nonlinear discrete systems with applications to population dynamics	
Pingzhou Liu	169
Some aspects of Carmichael's conjecture	
Walid Amin Ramadan-Jradi	173
