Chemotherapy of Meningitis

IN addition to its highly successful use in the treatment of cerebrospinal fever DAGENAN—M & B 693 is a valuable chemotherapeutic agent for use in other forms of meningitis whether primary or secondary to foci of infection.

In pneumococcal cases the dosage employed initially should be high, in the region of twice that commonly used in cerebrospinal fever, care being taken to ensure a high fluid intake in order that the danger of deposition of crystals in the urinary tract is lessened.

The dosage should also be high in meningitis due to Pfeiffer's bacillus or other resistant organism and THIAZAMIDE may be substituted if an adequate response is not obtained. The latter is the drug

of choice in *Staphylococcus aureus* cases.

In Haemolytic streptococcal meningitis sulphanilamide is the drug of choice with DAGENAN—M & B 693 as an alternative.

The rapidity with which an adequate concentration of the chemotherapeutic agent is built up is of crucial importance in all forms of meningitis. It is essential therefore that the initial dosage should be high and one or two injections of DAGENAN SODIUM—M & B 693 SOLUBLE are invaluable to supplement oral therapy at the outset. When oral administration is impracticable DAGENAN SODIUM—M & B 693 SOLUBLE may be administered by intravenous or intramuscular injection or constant intravenous drip infusion.

★ DAGENAN—M & B 693★ is supplied in containers of 25 tablets.

★ DAGENAN SODIUM—M & B 693 SOLUBLE★ is supplied in boxes of 6 x 3 c.c. ampoules

★ THIAZAMIDE is supplied in containers of 25 tablets.

★ THIAZAMIDE SODIUM is supplied in boxes of 6 ampoules.

Sulphanilamide is supplied in containers of 25 tablets.

The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

WALTER HOWARTH

ASSISTED BY

W. M. MOLLISON

1. Original Articles are accepted on the condition that they have not been published elsewhere.
2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.
3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked and no additional matter added.
4. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied, on which the price of the reprints is stated.
5. Authors of Original Communications on Oto-Laryngology in other Journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.
6. Editorial Communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.
7. The Annual Subscription commencing with the January issue is Two Pounds sterling, post free, and is payable in advance.
8. Single copies, both of the present and the previous series, are on sale at Four Shillings each.
9. All Subscriptions, advertising and business communications should be sent to the Publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.

United States of America

Orders for this Journal may be sent either through a local bookseller, or to Messrs. G. E. STECHERT & CO., 31-33 East 10th Street, New York, or may be sent direct to the Publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2, England.

PRESCRIBE THE EASY EFFECTIVE METHOD

When spraying, the patient can hold his head in a natural position, yet the solution spreads throughout the nasal cavity, assuring thorough treatment. Effective dropper-application, on the other hand, requires a complicated posture technique which patients are apt to neglect in home treatment.

**DeVilbiss
ATOMIZERS**

DROPPER ?

ATOMIZER ?

These illustrations, which are based on X-ray research, clearly demonstrate the advantages of the atomizer as compared with the dropper
