# The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR  
LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks will normally be held by the Printers for three years, after which they will be destroyed. Any author is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2. Coloured illustrations will be charged to authors, unless a special grant is authorized by the Editor.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

#### *United States of America*

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

# ZEISS

The greatest name in optics

## 3-way beam-splitter for observation and photography during surgery

This new beam-splitter  
triples the versatility of  
the Zeiss Operating  
Microscope.

As illustrated it allows simultaneous binocular viewing by the surgeon, observation by an assistant and 35mm photography. All 3 images are identical, upright and unreversed. A second observation tube can replace the camera to permit 2 assistants or students to observe the operation. Alternatively, 2 cameras can be attached to provide stereo-photography or differently magnified photographic records. The observation tubes are adjustable to any angle for comfortable viewing without the observer impeding the surgeon. The Zeiss Beam Splitter is also suitable for use with the Zeiss Slit lamp, Photo Slit lamp and certain other optical instruments. Write for full data and demonstration to the sole UK importers Degenhardt & Co Ltd Carl Zeiss House 20/22 Mortimer St London W1 Museum 8050 (15 lines) Scottish Enquiries to Degenhardt & Co (Scotland) Ltd 22 Burnbank St Glasgow NW Douglas 0520

**FROM  
THE  
FRONT**

...and with A.V.C. where required

—that is the triumph of the  
**MACKIE**  
hearing aid

The new Mackie post-aural hearing aid is made in several different circuit versions so that the gain and frequency response can be selected to match the patient's needs; and it is available where required with a unique form of automatic volume control which has proved highly successful in cases of recruitment. The forward pick-up microphone gives maximum

intelligibility of speech without background interference.

It is exported to many countries including the United States of America—a tribute to its high quality and advanced design.

In Great Britain it is available for trial by your patients from *independent* hearing aid dealers in all parts of the country.

# ORBENIN

## and its success in Gram-Positive Infections

### Otitis media Otitis externa

Boils  
Carbuncles  
Infected dermatoses

Pneumonia  
Lung abscess  
Acute bronchitis

Osteomyelitis  
Osteitis

### Tonsillitis Pharyngitis

Post-operative wound infections  
Burns  
Skin graft protection

Septicaemia  
Acute endocarditis

Staphylococcal enterocolitis  
Staphylococcal urinary tract infections  
Staphylococcal meningitis

ORBENIN (cloxacillin sodium B.P.) is a penicillin active against virtually all Gram-positive organisms, including staphylococci,  $\beta$ -haemolytic streptococci and pneumococci, irrespective of their resistance to other antibiotics.

It is encouraging that the widespread use of Orbenin in hospitals has not resulted in the emergence of resistant strains.

More than 300 references in the World Literature testify to the excellent clinical results obtained with Orbenin in a wide variety of Gram-positive infections.

Detailed literature is available on request.

### Dosage:

Two capsules (500mg.) or one vial (250mg.) q.i.d.

Please mention *The Journal of Laryngology and Otology* when replying to advertisements

What do you do about a case like this?

Now, for the profoundly deaf child and the adult with a severe fragmentary loss—a completely new hearing aid. The Zenith 'Vocalizer' enables hearing correction to be maintained down to frequencies previously beyond the scope of all but desk appliances. The 'Vocalizer' actually amplifies down to one hundred cycles. It can prove helpful for children and adults with some residual hearing for low frequencies but a total loss for the medium and high frequencies. It incor-

porates new facilities to provide for Loop Listening simultaneously with the child hearing his own voice for speech training. Because the 'Vocalizer' is light yet robust, he can continue to use the same aid at home as he uses at school.

**REFER YOUR PATIENTS TO INGRAMS** who will gladly provide this unique hearing aid on trial—or any other aid from their comprehensive range of twenty-six different makes. Patients have the widest choice with Ingrams. If you would like details, please write.

# BÉKÉSY ACCESSORY

For the very first time a fully automatic unit has been made available for a Clinic Audiometer, making the combined units into a true BÉKÉSY Audiometer.

This automatic accessory is being made for the PETERS SPD/5 CLINIC AUDIOMETER, which has a continuous frequency range and continuously variable attenuation. The result is therefore a true Békésy audiometer.

It can be attached to or detached from the audiometer in under one minute so that the two units together offer the facilities of an advanced clinic audiometer or Békésy audiometry at will.

It can be fitted to any existing SPD/5 Audiometer.

Please write for full details and demonstration to :

## Ceporin (cephaloridine)

### What makes this antibiotic so valuable in the E.N.T. unit?

#### Spectrum?

Exceptionally broad. It covers most gram-positive organisms—including the penicillin-resistant staphylococci—and many gram-negative organisms.

#### Action?

Intensely bactericidal. It gives a rapid kill of bacteria at or near the minimum inhibitory concentration, especially in the case of gram-negative organisms.

#### Safety?

Wide clinical usage has confirmed the laboratory evidence that Ceporin has a remarkably low toxicity—and it is usually well tolerated by patients allergic to penicillin.

#### Clinical record?

An analysis of results from over 1500 cases has recently shown high success rates in a wide variety of infections. Ear, nose and throat infections were included in a group of 87 soft tissue infections which showed an 85% satisfactory response. Many reports mention the rapid clinical response obtained with

Ceporin after other antibiotics had failed. Conditions which respond well to Ceporin include: mastoiditis, otitis media, sinusitis, quinsy, pharyngeal abscess, and intracranial infections secondary to infected sinuses and mastoiditis.

Because of its three main attributes—broad spectrum, bactericidal action and low toxicity—Ceporin has proved valuable for use in place of more toxic drugs or combinations of antibiotics. It also has special value when a quick clinical response is essential in infections caused by penicillin-resistant staphylococci and in the penicillin-hypersensitive patient.

Ceporin is issued in vials containing 250 mg, 500 mg and 1 gram of cephaloridine, packed singly and in boxes of five.

Detailed literature is available from Glaxo Laboratories Limited, Greenford, Middlesex.

Ceporin is a Glaxo trade mark
