Klithi: Palaeolithic settlement and Quaternary landscapes in northwest Greece

Vol. 1: Excavation and intra-site analysis at Klithi

Vol. 2: Klithi in its local and regional setting

Edited by Geoff Bailey

The Epirus region of northwest Greece has witnessed more dramatic changes of physical landscape than almost any other part of Europe. Tectonic activity has shaped a complex and dynamic topography, supplemented by the impact of a local ice sheet formed during the Glacial Maximum, and dramatic episodes of erosion triggered by changes of climate, vegetation and land use. These two volumes set out the history of Palaeolithic occupation over the past 100,000 years, bringing together the full range of studies carried out between 1981 and 1993 as part of the Klithi Project.

Volume 1 covers the results of excavation at the Klithi rockshelter and analysis of finds, together with an introduction to the whole project and the AMS dating programme which played a key role in on-site and off-site interpretation. Volume 2 deals with archaeological results from other sites and palaeoenvironmental and off-site studies, both locally at Klithi and in its immediate vicinity, and more widely within the region, concluding with a synthesis which brings together all the different strands of the investigation.

Volumes 1 and 2 to be sold together.

Vol. 1: xx + 316 pages, 187 ills.

Vol. 2: xvi + 380 pages, 231 ills.

Papers in the Prehistory of Languages

The Nostratic Macrofamily and Linguistic Palaeontology

by Aharon Dolgopolsky

Archaeologists and historical linguists have long been concerned with approaches which may throw light on the prehistory of human languages. One such approach reconstructs an early language through the examination of common features shared by its supposed daughter-languages. This book goes beyond that traditional approach by recognizing a whole series of language families as related and by reconstructing the vocabulary of the proto-language (i.e. Nostratic) ancestral to the entire macrofamily embracing these families. Nostratic is a hypothetical macrofamily of languages which includes Indo-European, Hamito-Semitic, Kartvelian, Uralic, Altaic and Dravidian languages, encompassing much of the old world. The argument presented here is based on more than 2000 common roots and affixes, in which regular sound correspondences are observed, of which 120 are discussed in detail. In this study Professor Dolgopolsky uses these Nostratic roots to derive information about the speakers of Proto-Nostratic, their habitat, their culture and economy, their kinship system and their environment. An attempt is also made to determine whether Proto-Nostratic should be assigned to the Neolithic period, or to an earlier epoch.

Contributors should submit three copies of articles, typed double-spaced on one side only of A4 or equivalent paper with good margins. Articles should normally be no more than 10,000 words, but longer articles will be considered. There is also provision for shorter notes of up to 5000 words. In the case of articles (though not shorter notes) an abstract of 100 words should also be supplied.

Submission on disk (preferably 3.5") is encouraged. When submitting a disk please specify file name(s), software and type of computer. Our preference is for Apple Macintosh Microsoft Word 5.1, but any other programme is acceptable.

Contributors are urged to aim for clarity of expression with a minimum of jargon.

For matters of style, prospective contributors should use the current issue of the journal as a guide to preferred practice. Detailed guidelines are available from the Editor.

Contributors of accepted articles will be asked to assign their copyright, on certain conditions, to the McDonald Institute for Archaeological Research.

Offprints. Twenty-five free offprints are supplied to authors of published articles, these to be shared between joint authors, and ten free offprints to each author of a review article. Further offprints may be purchased if ordered at proof stage.
