

Notes for Contributors

1. Manuscripts should preferably be written in English, but papers in French and German will also be accepted. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favourable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Deputy Editor or the Editor.

2. Typescripts should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, position and affiliations.

3. A short abstract of about 80 words should precede the main text. *List of symbols:* A typewritten list of any special symbols should be submitted with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential to help the typesetter and to avoid costly correction in proof.

4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.

5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy. Figures should be numbered consecutively, with arabic numerals, have descriptive captions, and be mentioned in the text. The correct position for each figure should be indicated in the margin of the manuscript.

6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables. Number tables

consecutively with roman numerals. Each should have a brief heading. Exceptionally lengthy tables may be summarized for publication with a note that copies of details can be obtained from the authors.

7. Equations: Wherever possible, mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. The printer will set all mathematical symbols in italics unless otherwise indicated; symbols or letters to be set in roman (upright) type should be encircled in pencil, while bold letters should be shown by a wavy underline.

8. References: In the text, references are indicated by superior arabic numbers (without brackets), and should be confined to publish work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names; cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of *Chemical Abstracts* or *Physical Abstracts*, and be underlined for italics: P.W. Anderson, "More is different" *Science* **177**, 393 (1972) C.V. Negoita, *Fuzzy Systems* (Abacus Press, Tunbridge Wells, UK, 1980)

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

9. Proofs: Page proofs will be sent to authors for correction, for return within 48 hours by airmail. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

10. Manuscripts, whether accepted or rejected, will not be returned to the authors.

11. Submission of an article will be taken to imply that it has not been previously published and that it is not on offer to any other publisher.

ROBOTICA

Volume 5 Part 2

April–June 1987

SPECIAL ISSUE ON ARTIFICIAL INTELLIGENCE

CONTENTS

Editorial for special A.I. issue, A. M. Andrew (UK)	87
Artificial Intelligence: building birds out of beer cans, Masoud Yazdani and Blay Whitby (UK)	89
AI and Robotics; Flexibility and Integration, Peter Mowforth and Ivan Bratko (UK)	93
Artificial intelligence for production engineering: a historical approach, Igor Aleksander (UK)	99
How robotics expands A.I., Alex. M. Andrew (UK)	111
Automatic generation of salient features for the recognition of partially occluded parts, T. N. Mudge, J. L. Turney and R. A. Volz (USA)	117
A systemic approach to pattern recognition, H. Emptoz and M. Lamure (France)	129
Book Reviews	135
END OF SPECIAL ISSUE	
Reports and Surveys (Automation in the Chemical Laboratories, Image Systems for Robot Vehicles, Industrial Productivity, Innovative Products and Projects, New Applications for Automation, Profile of a Robotics Company, Real-Time Obstacle Avoidance for Robots and Manipulators, Robots at Work in Hazardous Environments, Robots Worldwide, Rubber Muscles for Robots, Software Reports), B. H. Rudall (UK)	145
Robotic assembly: a synthesizing overview, H. S. Cho, H. J. Warnecke and D. G. Gweon (FRG)	153
Machine tool technology: an extended view, Keith E. McKee (USA)	167
Conference News	173
Announcements	177
