

## ACKNOWLEDGEMENT

The job of producing this Journal could not be done if it were not for the energetic co-operation of those who acted as referees.

The present editors wish to thank those named below, who have either refereed papers or provided advice in connexion with refereeing. They apologise for any omissions from the list.

The editors also thank Miss Wilma Langer and Mr. David Asche for the help they have given in the arduous work of preparing manuscripts for publication, and Mrs J. N. Malcolm and Mrs I. Zehetner for secretarial help.

**FORTHCOMING SCIENTIFIC  
PUBLICATIONS BY THE HOUSE OF NOORDHOFF**

**DYNAMICS OF LINEAR SYSTEMS**

**V. DOLEŽAL**

The monograph provides electro-engineers, mathematicians and research scientists with a ready reference source for important recent advantages in the field of electrical distribution nets, electromechanical and automatized regulation systems etc. The work demonstrates the importance of these new mathematical methods for the solution of problems concerned with the dynamics of linear systems.

**INELASTIC BEHAVIOUR IN SHELLS**

**W. OLSZAK EN A. SAWCZUK**

Survey of theoretical and experimental research.

This book surveys the main trends in the theory and research of inelastic shells. After recalling the fundamental field equations for inelastic solids, the main types of viscous and plastic response are analysed. The linear visco-elastic shells are analysed first. In non-linear viscoelasticity special attention is paid to steady creep problems. Further, the theory of elastic-plastic deformation is discussed. Finally, a coverage of the limit analysis theory of shells from the viewpoint of applications in various branches of technology, mostly in structural engineering, is presented. Up to date critical bibliography on inelastic shells is enclosed. The work also includes the results and methods presented at the 'International Association for Shell Structure' symposium on non-classical shell problems, held in Warsaw, 1963, of those presented at the IUTAM Congress, Munich, 1964, and of those presented at the Conference on Elasticity and Plasticity, Zakopane, Poland, 1964.
