

Theory of Metasomatic Zoning

D. S. KORZHINSKII

Translated by

JEAN AGRELL

The author derives systems of differential equations for infiltration and diffusion metasomatic zoning and uses them to study the main features of these processes. The signs that distinguish between infiltration and diffusion formations are examined. Various cases of infiltration and diffusion metasomatism are considered, and a theory of bimetasomatism is developed. The presentation of theoretical aspects is accompanied by reference to geological examples, and conclusions are drawn concerning the geological significance of the proposed theory. 45 text-figures £2.50

Geology of the Moon

A Stratigraphic View

THOMAS MUTCH synthesizes here the many geological studies that preceded the Apollo missions to the moon. Drawings and magnificent photographs including unpublished pictures taken on Lunar Orbiter missions are included. 220 text-figures £8.25

RADIOCARBON VARIATIONS AND THE ABSOLUTE CHRONOLOGY

edited by Ingrid U. Olsson, Associate Professor, Institute of Physics, University of Uppsala.

Contains the proceedings of the Twelfth Nobel Symposium held at Uppsala from August 11th to 15th. Leading chemists, physicists, geologists, archaeologists and geophysicists discussed the radiocarbon dating method which had been in use for twenty years in order to check the method against other dating methods and to investigate the causes of discrepancies in the results. Each paper is followed by a discussion.

658 pages Approx. 42ls. (£21.05)

Due Nov 1970

METHODS IN THE STUDY OF SEDIMENTARY STRUCTURES

by Arnold H. Bouma, Texas A & M University.

A compilation, and a practical illustrated reference book on the methods, materials, variations, limitations and applications used in the study of sedimentary structures.

474 pages 190s. (£9.50) Oct 1969

THE LUNAR ROCKS

by Brian Mason and William G. Melson, both at Smithsonian Institution.

A concise account of the results of investigations on rock samples taken from the Moon by the Apollo missions. Describes the mineralogy petrography and geochemistry in this new field of research and relates this information to the origin and evolution of the Moon.

Approx. 192 pages 84s. (£4.20)

Due Dec 1970

HYDROGEOLOGIST

Water Resources Survey

OMAN

Qualified Hydrogeologist required in January 1971 to direct the operations of a well-drilling contractor on an extensive water resources survey in Northern Oman (formerly Muscat and Oman). A considerable amount of travelling and living in remote areas is involved and the appointment is therefore on a bachelor basis, but one month's home leave (with free passage) is granted every five months. Free housing, transport, medical and dental treatment. Salary £3,000 to £4,000 depending on experience which must include work on a similar project.

Apply, giving details of qualifications and experience, to:

5 Winsley Street, LONDON WIN 7AQ.

NOTES FOR CONTRIBUTORS

Articles submitted for publication in the *Geological Magazine* should be addressed to the editors at the Sedgwick Museum, Downing Street, Cambridge CB2 3EQ, England, and sent in duplicate. Publications for notice and review should be marked for the review editor at the same address.

Contributions, including reference lists, should be typewritten, double-spaced, and should be carefully revised. Where typing errors are corrected or minor alterations made, they should be done neatly in the typescript, leaving the margins clear. Marginal marks should be used only when correcting proofs. Illustrations should be drawn to allow reduction to a maximum size of 165mm × 110mm; originals must not exceed 495mm × 330mm and must be sent in a flat package. Lettering must allow for legibility after reduction (i.e. equivalent to 1mm as a minimum on reduction). Duplicates of illustrations may be prints or, preferably, reductions. Metric units of the SI system are preferred. Illustrations in the text will be referred to as figures (Fig. 1, 1a, etc.), and halftone plates will be referred to (also in arabic) as Plates 1, 1a, etc. Folding plates will not be accepted. Captions must be typed on separate sheets.

The typescript must be accompanied by a short summary. Contributors should follow the rules in the Geological Society of London's *Notes to Authors* (*Proc. geol. Soc. Lond.*, No. 1627, Oct. 1965), with the following exceptions. The total length of a paper should not in general exceed 20 pages of the *Geological Magazine*; preference and priority are given to short papers. Primary headings should be in capitals, at margin, with arabic numeral; secondary headings should be in lower case (not underlined), with lower case letter in parentheses; tertiary headings should be in *lower case italics* (*underlined*), at margin, with lower case roman numeral in parentheses, (i), (ii), etc.

No cross-references by page should be given to other parts of the text, but 'above' and 'below' used (with the section specified, e.g. 'Section 2 a (i)'). References should be abbreviated in the form of the *World List of Scientific Periodicals* (4th edit., 1963–65) as far as possible. e.g. Lapworth, C. 1878. The Moffat Series. *Q. Jl geol. Soc., Lond.*, 34, 240–343. Books should be cited briefly as: Burns, R. G. 1970. *Mineralogical applications of crystal field theory*. 224 p., C.U.P., London. Unpublished work, e.g. from theses, should normally be referred to in the text in parentheses and not included in the reference list unless already in the press.

Twenty-five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to an agreed scale of charges.
