

NOTES FOR AUTHORS

Papers to be considered for publication should be sent to the Publications Secretary, The Royal Society of Edinburgh, 22 George Street, Edinburgh EH2 2PQ, Scotland.

A paper by more than one author must be submitted with a statement, signed by each author, to the effect that the paper in its entirety is approved by the joint authors and naming the author who will be responsible for correspondence with the Society.

Authors will receive fifty (50) offprints free of charge, this number to be shared between joint authors. Additional offprints may be obtained, in units of fifty, at a fixed scale of prices given on a form which will be attached to the proof.

In view of the high cost of publication, authors must prepare their papers as concisely as possible. Manuscripts should be submitted in triplicate and preferably should be typewritten on one side of A4 paper, double spaced with adequate margins. Authors are advised to retain a copy of their papers as the Society cannot accept responsibility for any loss.

Every paper must be accompanied by a Synopsis, in general not exceeding two hundred words, which will be printed in small type at the beginning of the paper.

References within the text should be indicated by bold numbers in square brackets, e.g. [2] or [3, p. 167]. For style of references at end of text, see recent issues of *Proceedings A*.

Authors should ensure that punctuation carries through the mathematics in the proper manner. The use of hyphens should be consistent. In the text avoid such abbreviations as: iff, w.r.t., a.e., \forall , \exists , and thm.

Footnotes should be avoided. Headings should not be underlined. Every effort should be made to avoid complicated subscripts, superscripts, ranges of summation and integration. Horizontal fraction signs should normally be avoided: use either solidus signs / or negative exponents. Replace $e^{(\dots)}$ by $\exp[\dots]$ if the expression in parenthesis is complicated. Simple formulae should *not* be displayed unless they require a formula number. Use the prime ' or d/dx , but preferably not a dot, to denote ordinary differentiation. If possible use subscripts to denote partial differentiation of $\partial/\partial x$ etc. Bars reaching over several letters should be avoided: use $\sqrt{()}$ or the exponent 1/2 for the square root. Sub-subscripts and super-superscripts should be avoided if possible: bars and other devices over indices cannot be supplied.

Note that confusion very often arises between 1 (one) and l (ell): 0 (zero) and O (Capital oh): \circ (composition) and o (lower case oh): x and \times : U and \cup : c and \subset : \in (belongs to) and ϵ (epsilon): \emptyset (empty set) and ϕ (phi): $_1$ and comma ,: prime ' and 1 : K and κ : p and ρ : w and ω : \sum (summation) and Σ (capital sigma): \prod (product) and Π (capital pi): v (lower case vee) and ν (Greek nu): a (lower case a) and α (Greek alpha): y (lower case y) and γ (Greek gamma). Please provide pencilled indicators in the margin where necessary. Where capitals and lower case of the same shape have to be printed, please indicate accordingly. Show italics by single underlining (except in the formulae which are set up normally in italics), bold face/Clarendon by wavy underlining and Greek by red underlining.

The statement of theorems, lemmas, et cetera, will be printed in italics and should be underlined. In definitions key words only should be in italics.

Equations should be indicated by numbers in parentheses in the right-hand margin.

Proofs of papers will be sent to the author. The cost of *authors' corrections in excess of five per cent of the printers' charge for the setting of a particular paper will be charged to the author.*

It is the policy of the Royal Society of Edinburgh not to charge any royalty for the production of a single copy of any one article made for private study or research. Requests for the copying or reprinting of any article for any other purpose should be sent to the Royal Society of Edinburgh, 22/24 George Street, Edinburgh EH2 2PQ

CONTENTS

DANIELA LUPO and SERGIO SOLIMINI	
A note on a resonance problem	1
GARY G. GUNDERSEN	
On the question of whether $f'' + e^{-z}f' + B(z)f = 0$ can admit a solution $f \neq 0$ of finite order	9
HENNING WIEBERS	
Critical behaviour of nonlinear elliptic boundary value problems suggested by exothermic reactions	19
A. ALVINO, P. L. LIONS and G. TROMBETTI	
A remark on comparison results via symmetrization	37
STAN CHIRIȚĂ	
Hölder continuous dependence in nonlinear elastodynamics	49
F. J. PASTIJN and MARIO PETRICH	
Rees matrix semigroups over inverse semigroups	61
G. B. PRESTON	
Semidirect products of semigroups	91
J. RENSHAW	
Extension and amalgamation in rings	103
A. G. RAMM	
Singularities of the inverses of Fredholm operators	117
KHR. N. BOYADZHIEV	
Generalizations of the Landau–Hadamard inequality and inequalities for quadratic polynomials of operators	123
L. A. MEDEIROS	
Remarks on a non-well-posed problem	131
S. D. HOWISON	
Bubble growth in porous media and Hele–Shaw cells	141
MARIÉ GROBBELAAR-VAN DALSEN	
Fractional powers of a closed pair of operators	149
ANDRZEJ BORZYMOWSKI	
A non-linear Goursat problem for a high order polyvibrating equation	159
M. S. P. EASTHAM	
A repeated transformation in the asymptotic solution of linear differential systems	173
