

## **Minerals and Men**

**An Exploration of the World of Minerals**

**Revised and Enlarged Edition**

*JAMES F. McDIVITT and  
GERALD MANNERS*

First published in 1965, *Minerals and Men* has now been completely revised and updated to take into account the new means by which the minerals industry has adjusted to meet the world's ever-increasing demands for these scarce resources. The authors examine the factors that determine the availability and cost of minerals, the growing importance of substitution, the need for low-cost power, and impacts on the environment. Of interest to specialists, *Minerals and Men* is primarily designed as a convenient source for the college undergraduate or advanced high school student.

From reviews of the first edition :

"A simple, logical, coherent explanation of the economic, political, technological, and social significance of metals and nonmetals in the earth's crust." – *Journal of Geological Education*

"This is a very useful book for non-specialists who are interested in acquiring a broad economic perspective on non-fuel minerals." – *Natural Resources Journal*

James F. McDivitt, formerly associate professor of mineral economics at Pennsylvania State University, is now Chief of UNESCO's mission in Indonesia. Gerald Manners, a former visiting scholar at Resources for the Future and the author of *The Changing World Market for Iron Ore, 1950–1980*, is reader in geography at University College, London.

*Published for Resources for the Future, Inc.*

175 pages £4.10

## NOTES FOR CONTRIBUTORS

Contributions for publication should be addressed to The Editors, Geological Magazine, Sedgwick Museum, Downing Street, Cambridge, CB2 3EQ, England.

All contributions, whether articles, correspondence or reviews, must be typed in duplicate on one side of the paper, double spaced throughout, with a wide margin on the left of each page and a narrower margin on the right. Any minor corrections should be made neatly in the typescript, leaving the margins clear.

Articles must be accompanied by a brief summary. Contributions should follow the general style of papers in recent issues of the Magazine and the principles laid down in *Notes to Authors* (*Proc. Geol. Soc. Lond.*, No. 1627. Oct. 1965). Headings should be set out clearly, but not underlined. Primary headings should be in lower case, at margin, with arabic numeral; sub-headings should be numbered *2.a*, *2.b*, etc., and tertiary headings *2.a.i.*, *2.a.2*. No cross references should be given by page number, but 'above' and 'below' should be used with the section specified, e.g. Section *2.a.i*. The total length of a paper should not in general exceed 20 pages of the Geological Magazine; preference and priority are given to short papers. The accuracy of references is the responsibility of authors. References must be double spaced and abbreviated in the form of the *World List of Scientific Periodicals* 4th Edition as far as possible, e.g. Lapworth, C. 1878. The Moffat Series. Q., *Jl geol. Soc, Lond.* 34, 240-343. Books should be cited briefly as: Burns, R. G. 1970. *Alinerological applications of crystal field theory*. 224 p., C.U.P., London. Unpublished work, e.g. from theses, should normally be referred to in the text in parentheses and not included in the reference list unless in the press.

Illustrations must be drawn to allow reduction to maximum size of 165 mm xi 10 mm; originals must not exceed 495 mm x 330 mm and must be sent in a flat package. Lettering must allow for legibility after reduction (i.e. equivalent to 1 mm as a minimum on reduction). Duplicates of illustrations may be prints or, preferably, reductions. Metric units of the SI system are preferred. Illustrations in the text will be referred to as figures (Fig. 2, *ia*, etc.), and halftone plates will be referred to (also in arabic) as Plates 2, *2a*, etc. Folding plates will not be accepted. Captions for figures and plates must be typed on separate sheets.

Twenty-five offprints of each paper will be provided free of charge. Additional offprints may be purchased according to a set scale of charges.
