CONTENTS

Preface		ix
Synopsis		xi
Part I. Presidential Address		
1. <i>The Road Since Structure</i>		3
Thomas S. Kuhn, Massachusetts Institute of Technology		
Part II. John S. Bell Session: State Vector Reduction		
2. <i>A Tribute to John S. Bell</i>		17
Abner Shimony, Boston University		
3. <i>I. Dynamical Reduction Theories: Changing Quantum Theory so the Statevector Represents Reality</i>		19
GianCarlo Ghirardi and Philip Pearle, University of Trieste and Hamilton College		
4. <i>II. Elements of Physical Reality, Nonlocality and Stochasticity in Relativistic Dynamical Reduction Models</i>		35
GianCarlo Ghirardi and Philip Pearle, University of Trieste and Hamilton College		
5. <i>Desiderata for a Modified Quantum Dynamics</i>		49
Abner Shimony, Boston University		
Part III. Biology: The Non-Propositional Side		
6. <i>Are Pictures Really Necessary?</i>		63
<i>The Case of Sewell Wright's "Adaptive Landscapes"</i>		
Michael Ruse, University of Guelph		
7. <i>Material Models in Biology</i>		79
James R. Griesemer, University of California, Davis		
8. <i>Mapping Ecologists' Ecologies of Knowledge</i>		95
Peter J. Taylor, Cornell University		
9. <i>Taming the Dimensions—Visualizations in Science</i>		111
William C. Wimsatt, University of Chicago		
Part IV. History of Philosophy of Science		
10. <i>Conventionalism and the Origins of the Inertial Frame Concept</i>		139
Robert DiSalle, University of Western Ontario		
11. <i>Designation and Convention: A Chapter of Early Logical Empiricism</i>		149
Thomas A. Ryckman, Northwestern University		

12.	<i>Hidden Agendas: Knowledge and Verification</i> Joia Lewis, University of San Diego	159
13.	<i>Philosophical Interpretations of Relativity Theory: 1910-1930</i> Klaus Hentschel, University of Göttingen	169
Part V. Deduction From the Phenomena		
14.	<i>Newton's Classic Deductions from Phenomena</i> William Harper, University of Western Ontario	183
15.	<i>Reasoning from Phenomena: Lessons from Newton</i> Jon Dorling, University of Amsterdam	197
16.	<i>"From the Phenomena of Motions to the Forces of Nature": Hypothesis or Deduction?</i> Howard Stein, University of Chicago	209
Part VI. Science as Process		
17.	<i>Phylogenetic Analogies in the Conceptual Development of Science</i> Brent D. Mishler, Duke University	225
18.	<i>The Function of Credit in Hull's Evolutionary Model of Science</i> Noretta Koertge, Indiana University	237
19.	<i>The Evolution of Scientific Lineages</i> Michael Bradie, Bowling Green State University	245
20.	<i>Conceptual Evolution: a Response</i> David L. Hull, Northwestern University	255
Part VII. Self-Organization, Selection and Evolution		
21.	<i>Form and Order in Evolutionary Biology: Stuart Kauffman's Transformation of Theoretical Biology</i> Richard M. Burian and Robert C. Richardson, Virginia Polytechnic Institute and State University and University of Cincinnati	267
22.	<i>Self Organization and Adaptation in Insect Societies</i> Robert E. Page, Jr. and Sandra D. Mitchell, University of California, Davis and University of California, San Diego	289
23.	<i>The Sciences of Complexity and "Origins of Order"</i> Stuart A. Kauffman, University of Pennsylvania	299

Part VIII. Statistical Inference and Theory Change		
24.	<i>The Appraisal of Theories: Kuhn Meets Bayes</i> Wesley C. Salmon, University of Pittsburgh	325
25.	<i>Giving up Certainties</i> Henry E. Kyburg, Jr., University of Rochester	333
26.	<i>Belief Revision and Relevance</i> Peter Gärdenfors, University of Lund	349
Part IX. Mathematical and Physical Objects		
27.	<i>Between Mathematics and Physics</i> Michael D. Resnik, University of North Carolina at Chapel Hill	369
28.	<i>Elementarity and Anti-Matter in Contemporary Physics: Comments on Michael D. Resnik's "Between Mathematics and Physics"</i> Susan C. Hale, California State University, Northridge	379
29.	<i>Problematic Objects between Mathematics and Mechanics</i> Emily R. Grosholz, The Pennsylvania State University	385
30.	<i>Structuralism and Conceptual Change in Mathematics</i> Christopher Menzel, Texas A&M University	397
Part X. Rudolf Carnap Centennial		
31.	<i>The Unimportance of Semantics</i> Richard Creath, Arizona State University	405
Part XI. Implications of the Cognitive Sciences for Philosophy of Science		
32.	<i>Implications of the Cognitive Sciences for the Philosophy of Science</i> Ronald N. Giere, University of Minnesota	419
33.	<i>Paradigms and Barriers</i> Howard Margolis, University of Chicago	431
34.	<i>Barriers and Models: Comments on Margolis and Giere</i> Nancy J. Nersessian, Princeton University	441
35.	<i>Some Twists in the Cognitive Turn</i> Steve Fuller, Virginia Polytechnic Institute and State University	445

Part XII.	Three Views of Experiment	
36.	<i>Allan Franklin, Right or Wrong</i> Robert Ackermann, University of Massachusetts, Amherst	451
37.	<i>Reason Enough? More on Parity-Violation Experiments and Electroweak Gauge Theory</i> Andy Pickering, University of Illinois at Urbana-Champaign	459
38.	<i>Allan Franklin's Transcendental Physics</i> Michael Lynch, Boston University	471
39.	<i>Do Mutants Have to be Slain, or Do They Die of Natural Causes?: The Case of Atomic Parity Violation Experiments</i> Allan Franklin, University of Colorado	487
Part XIII.	Computer Simulations in the Physical Sciences	
40.	<i>Computer Simulations</i> Paul Humphreys, University of Virginia	497
41.	<i>Computer Simulation in the Physical Sciences</i> Fritz Rohrlich, Syracuse University	507
42.	<i>Computer Simulations, Idealizations and Approximations</i> Ronald Laymon, The Ohio State University	519
Part XIV.	Laws, Conditions and Determinism	
43.	<i>Determinism in Deterministic Chaos</i> Roger Jones, University of Kentucky	537
44.	<i>How Free are Initial Conditions?</i> Lawrence Sklar, University of Michigan	551
45.	<i>Law Along the Frontier: Differential Equations and Their Boundary Conditions</i> Mark Wilson, The Ohio State University	565
