ENTERED AT STATIONERS' HALL

We have experimentally proved that Listerine is a powerful antiseptic, preventing the development of bacteria and decomposition of vegetable infusions.—*British Medical Journal*, May 3, 1890.

**LISTERINE** is an efficient, non-toxic ANTISEPTIC of known and definite power, prepared in a form convenient for immediate use.

It is a saturated solution of boric acid, reinforced by the antiseptic properties of ozoniferous oils.

It is unirritating, even when applied to the most delicate tissue.

It does not coagulate serous albumen.

It is quite generally accepted as the standard antiseptic preparation for use where a poisonous or corrosive disinfectant can not be safely used.

It is particularly useful in the treatment of abnormal conditions of the mucosa, and admirably suited for a wash, gargle or douche in catarrhal conditions of the nose and throat.

In proper dilution, it may be freely and continuously used without prejudicial effect, either by injection or spray, in all the natural cavities of the body.

There is no possibility of poisonous effect through the absorption of Listerine.

*A pamphlet descriptive of the antiseptic, and indicating its utility in medical, surgical and dental practice, may be had upon application to the manufacturers, Lambert Pharmacal Co., Locust and Twenty-first Streets, St. Louis, Missouri, U.S.A., or to their British Agents, Messrs. S. Maw, Son & Sons, 7-12, Aldersgate Street, London, Eng., but the best advertisement of Listerine is*

## Immunisation against Hay Fever.

THE DEPARTMENT FOR THERAPEUTIC INOCULATION, ST. MARY'S HOSPITAL, LONDON, W., prepares for supply to the Medical Profession through the agency of Messrs. Parke, Davis & Co.

### **"POLLACCINE" (POLLEN VACCINE FOR HAY FEVER)**

to be administered subcutaneously for the production of immunity to pollen toxin, both as a prophylactic and curative of hay fever.

### **A HAY FEVER REACTION OUTFIT**

is also supplied, which affords a means of determining

- (a) whether a patient is susceptible to pollen toxin.
- (b) the degree of such susceptibility.
- (c) the dosage of "Pollaccine" suited to any case.

**N.B.—The early spring is the best time for administering prophylactic injections.**

*Further particulars will be supplied on request by*

**PARKE, DAVIS & CO., 50, Beak Street, LONDON, W.**  
Regent Street,

Telegraphic and Cable Address: "Cascara, London."      Telephones: Regent 3260 (six lines).

## **THE TONSILS AND THE VOICE**

### **IN SCIENCE, SURGERY, SPEECH AND SONG.**

WITH ORIGINAL CONTRIBUTIONS FROM THE HIGHEST MEDICAL AND VOICE AUTHORITIES.

By **RICHARD B. FAULKNER, M.D.** (Columbia University).

No treatise on the tonsils is complete unless it includes the questions of the voice. Delicate, difficult, complex, technical questions of the voice arise. This work presents the evidence and furnishes the proof that the faucial tonsil possesses important mechanical, acoustic and phonetic functions. It shows the purpose of the tonsil in the vocal scheme and gives a clear exposition of the science of the vocal art. The only work on the subject published in any language.

*Medical Record* (New York): "The object of this work is to present known facts, the latest views of the most eminent authorities, and the indications which denote safe lines of treatment. The author strikes a timely note of conservatism."

*Archivii Italiani di Laryngologia* (Naples): "The book commends itself. It is well thought out and brilliantly expounded."

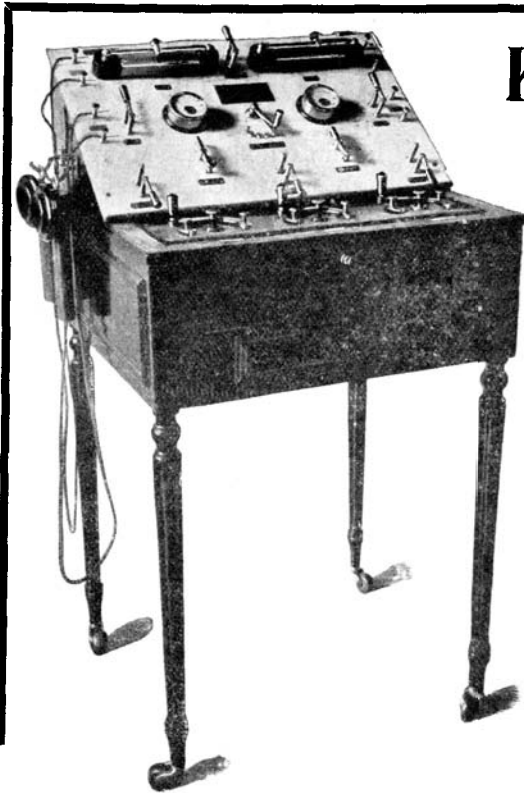

*La Presse Oto-Laryngologique Belge* (Brussels): "It furnishes a documentary argument down to its last details, and rests on the opinion of all that the science of the vocal art and laryngology contains of illustrations and practice the most renowned."

**Cloth, TWO DOLLARS, net. Four hundred pages. Illustrated.**

*Sent post paid upon receipt of price. Also through all booksellers.*
