## IAU Symposium No.293

27–31 August 2012

Beijing, China

# Formation, Detection, and Characterization of Extrasolar Habitable Planets

This discovery of several Earth-like planets within the habitable zones of their host stars has triggered extensive research on the formation, dynamical evolution, interior dynamics, and atmospheric characteristics of extrasolar habitable planets. IAU Symposium 293 presents a collection of articles on the state of the art research on these topics, including new discoveries of habitable exoplanets. The volume starts by reviewing the current state of the detection of habitable planets, and after guiding the reader through the most recent theoretical and observational achievements on the discovery and understanding of potential life-harboring bodies, concludes by presenting the reader with a review of the upcoming missions that search for Earth-like planets around other stars, and the likely signatures of extraterrestrial life. This comprehensive, up-to-date, and technical volume targets those seeking to understand the origin of life and the possibility and detection of life elsewhere in the Universe.

Proceedings of the International Astronomical Union

*Editor in Chief: Prof. Thierry Montmerle*

This series contains the proceedings of major scientific meetings held by the International Astronomical Union. Each volume contains a series of articles on a topic of current interest in astronomy, giving a timely overview of research in the field. With contributions by leading scientists, these books are at a level suitable for research astronomers and graduate students.
