

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}_M\mathcal{S}\text{-T}_E\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{A}_M\mathcal{S}\text{-T}_E\mathcal{X}$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a 5 $\frac{1}{2}$ IBM PC compatible diskette or via e-mail to ams@maths.uq.oz.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

An analogue of Kolmogorov's law of the iterated logarithm for arrays	
Soo Hak Sung	177
On denseness of certain norms in Banach spaces	
M. Jiménez Sevilla and J.P. Moreno	183
Measure convergent sequences in Lebesgue spaces and Fatou's lemma	
Heinz-Albrecht Klei	197
Homogeneous Poisson structures	
F. Malek and A. Shafei Deh Abad	203
The Bloch space and Besov spaces of analytic functions	
Karel Stroethoff	211
Embedding into groups with well-described lattices of subgroups	
Viatcheslav N. Obratsov	221
Harmonicity of a foliation and of an associated map	
Philippe Tondeur and Lieven Vanhecke	241
A generalised quasi-variational inequality without upper semicontinuity	
Paolo Cubiotti and Xian-Zhi Yuan	247
Diagonal Cauchy spaces	
D.C. Kent and G.D. Richardson	255
The Selmer groups and the ambiguous ideal class groups of cubic fields	
Yen-Mei J. Chen	267
Full subrings of E-rings	
Shalom Feigelstock	275
On almost additive functions	
Janusz Brzdęk	281
On the genus of some modular curves of level N	
Chang Heon Kim and J. Kyung Koo	291
Testing on null sequences is enough for Bochner integrability	
Fernando Mayoral and Pedro J. Paúl	299
Dimensions of spaces of Siegel modular forms of low weight in degree four	
Cris Poor and David S. Yuen	309
Some existence theorems for differential inclusions in Hilbert spaces	
Shih-sen Chang, Yu-qing Chen and Byung Soo Lee	317
On the range of the Y-transform	
Vu Kim Tuan	329
Class two nilpotent capable groups	
Hermann Heineken and Daniela Nikolova	347
