

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{T}\mathcal{E}\mathcal{X}$. (We accept Plain $\mathcal{T}\mathcal{E}\mathcal{X}$, $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$.) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Proficient presentations and direct products of finite groups	
K.W. Gruenberg and L.G. Kovács	177
A bound on the Schur multiplier of a prime-power group	
Graham Ellis and James Wiegold	191
On groups with small orders of elements	
Narain D. Gupta and Victor D. Mazurov	197
Finite normal edge-transitive Cayley graphs	
Cheryl E. Praeger	207
Finitely presented centre-by-metabelian Lie algebras	
R.M. Bryant and J.R. J. Groves	221
Subgroup coverings of some linear groups	
R.A. Bryce, V. Fedri and L. Serena	227
Finitely generated subgroups and the centre of some factor groups of free products	
C.K. Gupta and N. Romanovski	239
Recalcitrance in groups	
R.G. Burns, W.N. Herfort, S.-M. Kam, O. Macedońska and P.A. Zalesskii	245
Counting cyclic and separable matrices over a finite field	
G.E. Wall	253
What groups were: A study of the development of the axiomatics of group theory	
Peter M. Neumann	285
The ideal structure of nilpotent-generated transformation semigroups	
M. Paula O. Marques-Smith and R.P. Sullivan	303
Reduction of dimension of approximate inertial manifolds by symmetry	
Anibal Rodriguez-Bernal and Bixiang Wang	319
A complete classification of finite homogeneous groups	
Cai Heng Li	331

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

On classes associated with radical and semisimple classes	
Robert McDougall	335
Well-bounded operators on general Banach spaces	
Qingping Cheng	337
Varieties of universal algebras generated by finite algebras associated with cycle systems	
Sarah Zahrai	341
Summing series using residues	
A. Sofu	343
Nonlinear dynamics in infant respiration	
Michael Small	345
Theorems of Birkhoff type in pseudovarieties and e-varieties of regular semigroups	
Genevieve Churchill	349
On the design of factorial experiments when the observations are correlated	
Leslie James Elliott	351
