## High Performance with Texas Transistors

### Smiths 100,000 ft Altimeter

The Smiths 100,000 ft Altimeter introduces a radically new design which gives greatly increased sensitivity and accuracy. The conventional mechanical linkage from pressure sensitive element to presentation gearing is replaced by an electro-magnetic pick-off and external amplifier which supplies power to a servomotor in the altimeter. Transistorisation of the amplifier with Texas Silicon Transistors cuts the weight by 3 lb and the bulk size by 80 per cent, and at the same time gives the equipment greater ruggedness. The transistors are from the Texas small signal range 2S002-5 and 2S014. Whatever your problem there is a wide range of Texas transistors, silicon rectifiers, and other semiconductor devices to give you high performance in all your needs.
