

The Ecology of Rocky Coasts

Edited by **Dr P G Moore** and **Dr R Seed**

This is probably the most comprehensive volume on the subject of the ecology of rocky coasts ever published. The book is the work of twenty-four internationally outstanding experts in the field. It includes the most recent research and evaluations and presents a complete overview of littoral and sub-littoral communities. The lavish use of graphs, line drawings and photographs illustrate clearly the main points of each chapter.

The Journal of Animal Ecology

An official journal of the British Ecological Society

Edited by **L.R. Taylor** and **J.M. Elliott**

This leading international journal publishes papers on original research in all branches of animal ecology. A balance is sought between aquatic and terrestrial environments, between invertebrates and vertebrates, and between theoretical, experimental and analytical approaches to soundly-based field data. Occasional purely descriptive, theoretical or review papers may be published on animals or concepts of special interest, as part of an extensive development of a subject or as an adjunct to a long-term project. The journal has consistently published landmark papers in the development of the subject and continues to set standards in quantitative interpretation.

Subscription Information

The Journal of Animal Ecology is published three times a year and the subscription rates for 1985 are: £65.00 (U.K.), £78.00 (overseas), \$155.00 (U.S.A. & Canada) post free.

Subscriptions and free specimen copies are available from:

NEW TITLES FROM THE WORLD'S OLDEST PRESS

Basic Marine Biology

A. A. FINCHAM

Illustrated by **A. MILNE** and **P. STEBBING**

A large-format, highly-illustrated book which aims to provide a basic grounding in marine biology for amateur naturalists and biology students. The lively text is supplemented by specially prepared line diagrams and striking black and white photographs.

*Co-published with the British Museum
(Natural History)*

Diving and Marine Biology

The Ecology of the Sublittoral

GEORGE F. WARNER

Over the last twenty years the aqualung has established itself as an essential research tool for marine biologists making detailed ecological studies below the low tide mark. This attractively illustrated volume celebrates the exciting new world that has been opened up, and looks in particular at the ecology of kelp forests and coral reefs.

Algal Symbiosis

A continuum of Interaction Strategies

Edited by **LYNDA J. GOFF**

The contributors to this book view algal symbioses as a continuum, each interaction being as much a function of the evolutionary history of the 'players' as their present place in the system. Overemphasis on categorisation, they argue, actually obscures the true physiological and genetic nature of the interaction.

The Ecology of Algae

F. E. ROUND

Algal ecology and symbiosis are comprehensively examined in this substantial and stimulating survey. Professor Round looks at individual habitats, seasonal growth cycles, energy flow, dispersion and palaeoecology, stressing in particular the importance of algae in symbiotic relationships and their role in aquatic food chains.

Communicating in Science: Writing and Speaking

VERNON BOOTH

Writing scientific papers and giving talks at meetings and conferences are essential parts of research scientists' work. This short, straightforwardly written book, which is full of useful information, will help workers in all scientific disciplines to present their results effectively. The first chapter is about writing a scientific paper and is a revision of an essay that won first prize in a competition organized by Koch-Light some years ago. Later chapters discuss the preparation of typescripts, speaking at meetings and writing theses. There are also chapters addressed particularly to those scientists whose first language is not English and to those in North America. The last chapter gives information about dictionaries, style books and other literature.

Dr Booth has for many years written and spoken about his own work and has edited other scientists' work; he draws his examples from a range of subjects.

A New title in the 'Cambridge Studies in Ecology' series . . .

The Ecology of Phytoplankton

C. S. REYNOLDS *Freshwater Biological Association*

This book deals with the wide spectrum of lifestyles adopted by freshwater phytoplankton, but it also makes frequent reference to the marine counterparts. Firstly the problems encountered by these organisms are discussed and then their physiological and structural adaptations are examined. The final chapter contains an illuminating comparison of the seasonal and longer term changes in planktonic composition observed in different types of lake.

This is the first major book on the subject for some years and will be welcomed as a guide to recent research findings.

The Cambridge Guide to the Material World

RODNEY COTTERILL

Rodney Cotterill's *The Cambridge Guide to the Material World* provides a unique single-volume introduction to the materials found on this planet, both organic and inorganic.

The opening sections are devoted to such fundamental topics as the nature of the atom, the structure of molecules and the common states of matter. There then follow chapters on specific classes of material, notably ceramics, glasses, metals, conductors and insulators, liquid crystals, and natural and synthetic polymers. Minerals, water and the living cell are considered in detail and the book concludes with a characteristically lucid discussion of the molecular structure of plant and animal life. Each chapter is packed with fascinating examples and analogies, and closes with a useful summary of what has gone before.

- ★ Numerous full colour photographs and illustrations
- ★ Text and illustrations carefully integrated to ensure maximum clarity and readability
- ★ Topics requiring special attention prominently highlighted in display panels

297 x 210 mm 352 pp. 190 illustrations including 90 in full colour and 30 in two colours

THE MARINE BIOLOGICAL ASSOCIATION OF THE UNITED KINGDOM

THE ASSOCIATION was founded in 1884 to promote accurate researches leading to the advancement of zoological and botanical science and to an increase in our knowledge of the food, life, conditions and habits of British fishes. The work of the Association is controlled by a Council elected annually by its subscribing members.

Professor T. H. Huxley took the chair at the initial meeting held in the rooms of the Royal Society and was elected the first President. Among those present were Sir John Lubbock (afterwards Lord Avebury), Sir Joseph Hooker, Professor H. N. Moseley, Mr G. J. Romanes, and Sir E. Ray Lankester who, after Professor Huxley, was for many years president of the Association. It was decided to build a laboratory at Plymouth, where a rich and varied fauna is found.

The Plymouth Laboratory was opened in June 1888, and, since that date, considerable additions have been made to the buildings, including a library, lecture-hall, and extensive laboratory accommodation with up-to-date equipment. Additional sea-water reservoirs have also been built, and an aquarium, modernized in 1959, opened to the public.

Since its foundation the Association has been supported by subscriptions and donations from private members, universities, learned societies, the Fishmongers' Company and other public bodies. For some time past, however, the main financial support for the work of the Plymouth Laboratory has come from Government funds, and since 1965 the Laboratory has been grant-aided through the Natural Environment Research Council.

The Marine Biological Association, under the direction of its Council, undertakes research in all branches of marine science and the main results are published in this journal. Accounts of the laboratory and aquarium are to be found in Vol. 27 (p. 761), Vol. 39 (p. 391) and Vol. 43 (p. 281), and summaries of the activities and research of the Association are given annually in the Report of the Council in the November issue of the Journal.

The laboratory is open throughout the year and its work is carried out by a fully qualified research staff under the supervision of the Director. The names of the members of the staff will be found on the inner page of the front cover. Accommodation is available for British and foreign scientific workers who wish to carry out independent research in all branches of marine science. Arrangements are made for courses for advanced students, and marine animals and plants are supplied to educational institutions.

Work at sea is undertaken by three research vessels and by a motor boat, and these also collect the specimens required in the laboratory.

TERMS OF MEMBERSHIP

	£
Annual Members, receiving the Journal . . . per annum	15.00
Annual Members, without the Journal . . . per annum	3.00
Founders	100.00
Governors	500.00

Annual subscriptions become due on 1 January.

Members of the Association have the following rights and privileges: they elect annually the Officers and Council; they are entitled to receive the Journal of the Association at a reduced rate; they are admitted to view the laboratory at Plymouth; they have the first claim to rent a place in the laboratory for research, with use of tanks, boats, etc.; they have the privilege of occupying a table for one week in each year free of charge; and they have access to the books in the library at Plymouth during working hours.

The Commissioners of Inland Revenue have approved the Association for the purposes of Section 16, Finance Act, 1958, and that the whole of the annual subscription paid by a member who qualifies for relief under the section will be allowable as a deduction from his emoluments assessable to income tax under Schedule E.

All correspondence should be addressed to the Director, The Laboratory, Citadel Hill, Plymouth, PL1 2PB.
