

CLAY MINERALS

VOLUME 17, NUMBER 4, DECEMBER 1982

CONTENTS

B. D. CERVELLE et M. MAQUET. Cristallochimie des lizardites substituées Mg-Fe-Ni par spectrométrie visible et infrarouge proche	377
C. E. CORBATÓ and R. T. TETTENHORST. Two examples of quantitative analysis by simulated X-ray powder diffraction patterns	393
D. MINICHELLI. The quantitative phase analysis of clay minerals by X-ray diffraction: modern aspects of industrial routine control	401
C. BONNOT-COURTOIS et N. JAFFREZIC-RENAULT. Etude des échanges entre terres rares et cations interfoliaires de deux argiles	409
A. PERRUCHOT et F. DELBOVE. Etude thermodynamique des échanges d'ions entre gels silicates (A,B)O-SiO ₂ -nH ₂ O et solutions aqueuses (A ²⁺ , B ²⁺) d'éléments de transition	421
J. M. HUGGETT. On the nature of fibrous illite as observed by electron microscopy	433
S. EVANS and E. RAFTERY. X-ray photoelectron diffraction studies of lepidolite	443
PH. BOYER. Quelques aspects de l'action des termites du sol sur les argiles	453
J. TORRENT and R. GUZMAN. Crystallization of Fe(III)-oxides from ferrihydrite in salt solutions: osmotic and specific ion effects	463
Notes	
U. SCHWERTMANN and H. FECHTER. The point of zero charge of natural and synthetic ferrihydrites and its relation to adsorbed silicate	471
S. EVANS and E. RAFTERY. Determination of the oxidation state of manganese in lepidolite by X-ray photoelectron spectroscopy	477
M. STUL. Selective liquid adsorption on dodecylpyridinium clay by HPLC	483
