

Extending your conference paper for submission in the International Journal of Microwave and Wireless Technologies

The *International Journal of Microwave and Wireless Technologies* (IJMWT) welcomes the submission of expanded papers from recent conferences, meetings and symposia. In order to assist authors in producing articles suitable for submission, we have created the following guide with instructions on what to include or adapt in their expanded article.

Every expanded paper manuscript submitted for publication *must clearly disclose the earlier publication*, by providing reference in the Introduction to the conference paper to the effect: “An earlier version of this paper was presented at the XXX Conference and was published in its Proceedings [1].” Reference [1] should be a complete reference to the original conference article including a web link and its Digital Object Identifier (DOI).

Every conference paper is different, and so the instructions below provide general advice which should be followed in conjunction with the IJMWT submission guidelines, available in full here: <https://www.cambridge.org/core/journals/international-journal-of-microwave-and-wireless-technologies/information/instructions-contributors>

- The body of the paper must be expanded to include new data and results.
- The paper submitted to IJMWT should have a new title. The introduction and conclusions should be adjusted accordingly.
- Use feedback obtained from colleagues and the conference to update, revise, and rewrite your conference paper, as appropriate, to improve the paper’s overall quality. Questions and comments raised at the conference should be incorporated and addressed in your expanded narrative.
- The cover letter accompanying the submission should summarise the key differences between the original conference paper and the expanded journal paper.

All papers submitted to the IJMWT will undergo our standard peer-review process and should be submitted via the IJMWT ScholarOne portal: <https://mc.manuscriptcentral.com/mrf>

Please check if there is an option to submit your expanded conference article under a Special Issue associated with the conference. If not available, this work can be submitted as a standard research article.

More details about the IJMWT can be found at:

<https://www.cambridge.org/core/journals/international-journal-of-microwave-and-wireless-technologies>

We look forward to receiving your expanded conference contributions.
